1 Introduction to SyncJe for iPhone

SyncJe for iPhone allows you to synchronize your Contacts, Calendar Information and Notes with SyncML servers. A license must be purchased in order to utilize SyncJe for iPhone past the 15 day free trial period. Use of SyncJe for iPhone will require that your iPhone has the ability to install third party applications. You will not be able to use SyncJe for iPhone if you do not have an application loader.

Use of this SyncJe product requires the ability to install third-party applications on your iPhone using special Installer software. (IMPORTANT NOTE: Installing external applications on an iPhone may void one or more warranties and should only be performed by experienced, knowledgeable users. Nexthaus is not responsible for anything that happens to your iPhone as a result of installing or using this application. Proceed at your own risk.)

A) Purchasing a License

Go to http://nexthaus.com/products_b_iphone.html.

1. Click "buy now"
2. Enter a unique username you wish to use for SyncJe for iPhone.

NOTE: If you are purchasing multiple licenses, please make sure you enter a different username for each license. If you would like to purchase 10 or more licenses, please contact sales@nexthaus.com for discount information.

3. Follow PayPal instructions.

B) Required Components

The following is required for SyncJe for iPhone to function properly:

- iPhone with OS Version 1.0 to 1.1.4
- Internet Connection and Browser application on the iPhone
- iPhone Server access information: Username, Password, Server URL (from your SyncML server provider)
- Ability to install third party applications to your iPhone.

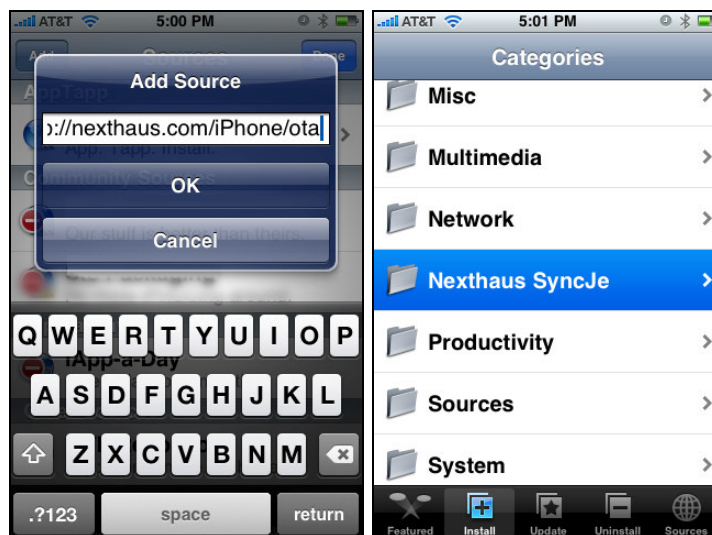

2 Installing SyncJe for iPhone

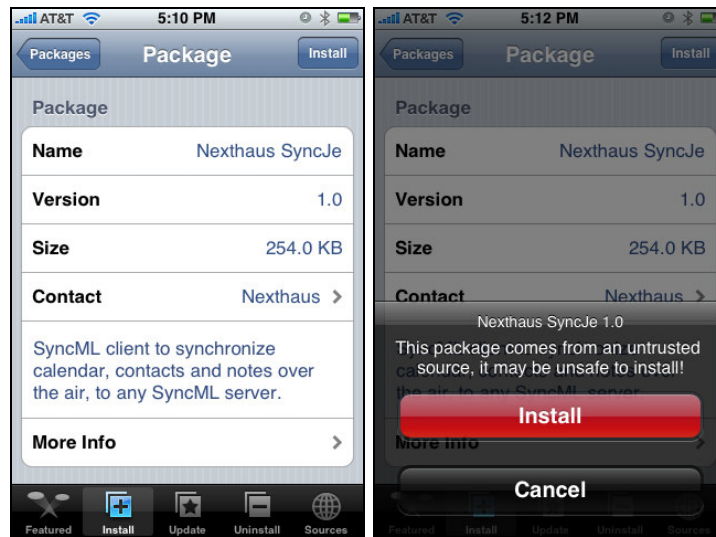

A) Download directly to iPhone Over the Air (Quick instructions)

(Scroll down to section B for Detailed instructions)

Start your iPhone application loader

1. Add the following source:
<http://www.nexthaus.com/iphone/ota>
2. Install Nexthaus SyncJe
3. If you were able to successfully install SyncJe for iPhone, you will see Nexthaus SyncJe  icon on your home screen.

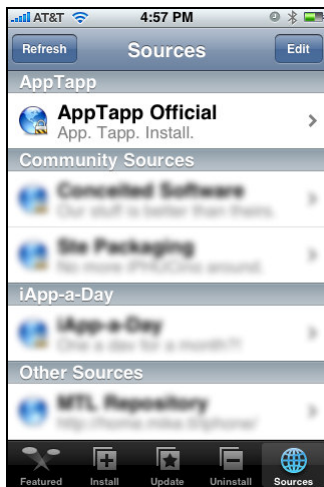

B) Download directly to iPhone Over the Air (Detailed instructions)

The application is downloaded using an application called AppTap, which you must have already obtained and installed on your iPhone. These installation instructions only cover the process of **using AppTap to download and install the SyncJe for iPhone application.**

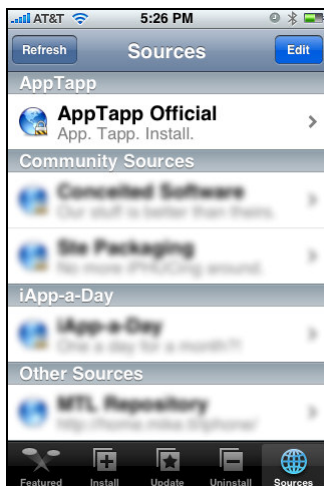

1. Run the installer

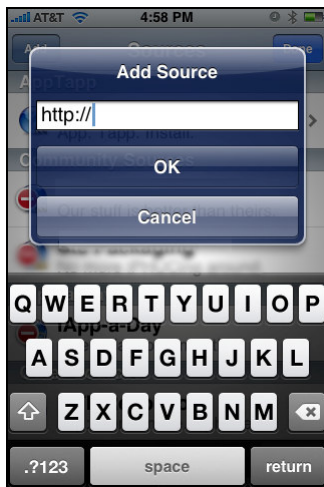

2. Next, select 'Sources'

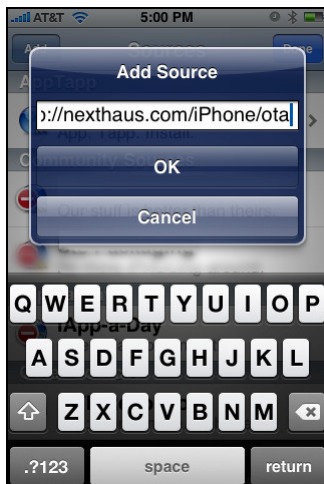

3. Press "edit", located in the top-right corner of the screen

4. Press "add", located in the top-left corner of the screen

5. A dialog window opens, prompting you to enter a URL. Enter the following URL: <http://www.nexthaus.com/iphone/ota>. After entering the URL, press "OK".

6. Next, select "install" and scroll down the list of repositories and select "Nexthaus SyncJe"

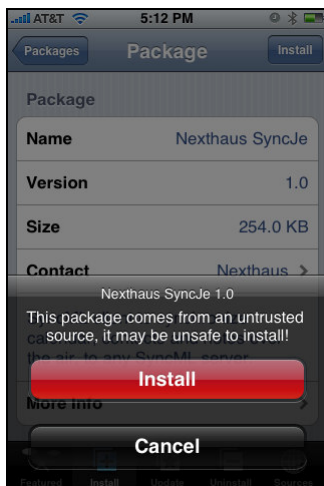

7. Next, select "Nexthaus SyncJe"

8. Select 'Install' icon in the upper right hand corner of your screen

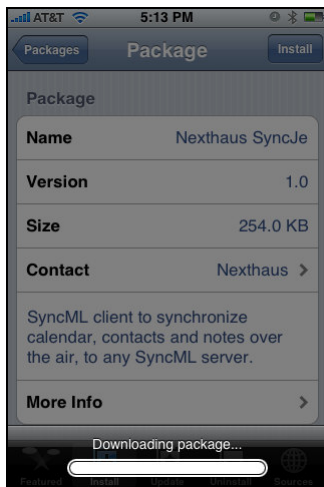

9. You may need to acknowledge a possible warning about third-party software:

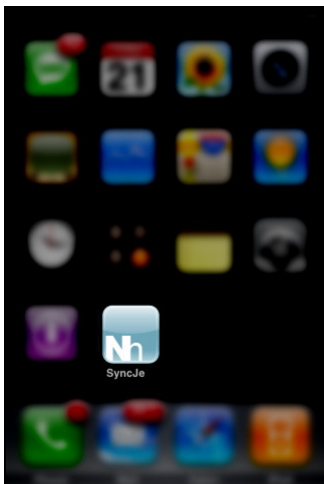

10. If you decide to continue, the software will automatically download and install

syncje iPhone

11. The SyncJE client will be on your home screen, labeled 'SyncJe'

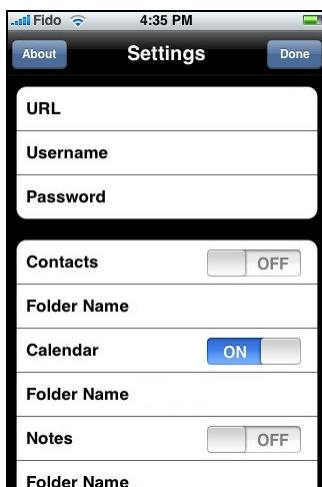

3 Quick-Start Configuration Guide

1. After installing the application, run it by selecting the SyncJe application icon displayed in your iPhone's main menu (). After the initial splash screen loads, the sync screen will load:

2. Press the settings button (), located at the bottom-right corner of the screen. You will be presented with the following settings screen:

3. Enter in your SyncML server URL, your SyncML username, and password into the spaces provided (typically these last two fields are your email address and email password). You can do this by pressing on the empty

area beside each field, and then using the on-screen keyboard which will appear on the bottom half of the screen.

If you are using goosync, use the following information in these fields:

URL: <http://sync.goosync.com>

Username: your goosync username

Password: your goosync password

Goosync users also need to log into the goosync web interface, and change the device listed there to "iPhone". Log in at <https://www.goosync.com/Login.aspx>, then open "My Device" and press the "Change Device" button. Select "iPhone".

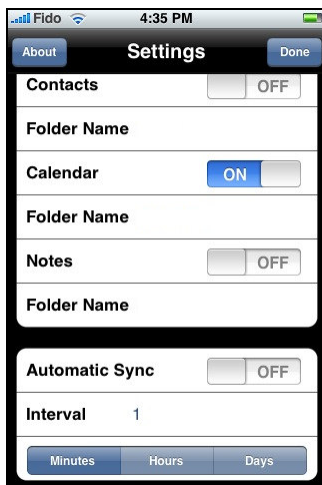

Mobical Users should enter the following information:

URL: <http://www.mobical.net/sync/server>

Username: <Your Mobical username>

Password: <Your Mobical password>

When you are finished entering information into these 3 fields, scroll down to view the other settings on this screen by placing a finger on the screen and making an upwards flicking motion. The following screen will be displayed:

4. Next, select what type of information you would like to sync. You can sync contacts, calendar information, and notes. You can enable or disable syncing for each type of data by pressing on the on/off switches for each data type (as shown above).

You will also need to enter the folder name for each data type you want to sync. This is the name of the folder on the SyncML server. Generally, the typical folder names are:

Contacts: ./contacts
Calendar: ./calendar
Notes: ./vnotes

If you are syncing with an Oracle Collaboration Suite server, use the following settings:

Contacts: ./contacts
Calendar: ./calendar/events
Notes: ./vnotes

Goosync users should use the following settings:

Contacts: (turn this data type off)
Calendar: Calendar
Notes: (turn this data type off)

Mobical users should use the following folder settings:

Contacts: ./contacts
Calendar: cal
Notes: ./vnotes

If these settings do not work, please contact your SyncML server administrator for assistance in determining the correct folder names.

5. If you wish to set up automatic syncing, enter a number in the "interval" section at the bottom, and indicate if you want this to be minutes, hours or days. For example, if you set the interval to 15, and select the "minutes" button, then SyncJe will sync every 15 minutes. **The recommended setting is 1 hour.**
6. When you are finished, press "done". You will be returned to the main sync screen:

7. To sync your data, press the "sync" button near the top-right of the screen.

4 Settings for SyncJe for iPhone

The following information is required in order to synchronize to the server:

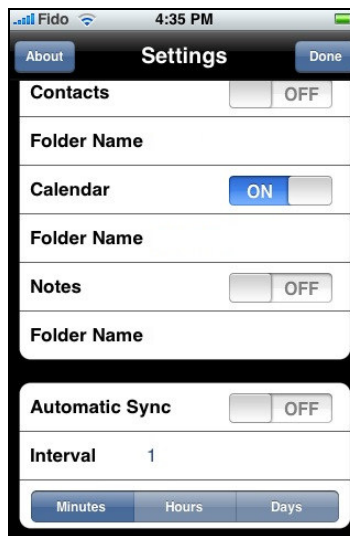

A) Adding required information to your iPhone

1. On your iPhone home screen browse for Nexthaus SyncJe icon.
2. Select the Nexthaus SyncJe  icon.
3. Press the settings button (located on the bottom right corner of your screen).
4. Fill in required information: Server URL, Username, Password (provided by your SyncML Service Provider).
5. Scroll down select the type of information (Contacts, Calendars and Notes) you wish to sync.
Specify folder names of each type of information you are syncing. Please confirm with your SyncML service provider what the exact folder name conventions are (Ex ./contacts ./calendar ./vnotes).
6. Once you are satisfied with all your settings, press “Done.”

Please ensure that your SyncML service provider has iPhone listed and or enabled as the compliant device to the SyncML servers and your SyncML account.

B) Required Information Settings on your iPhone

Required Information	Description
Server URL	This is where you enter the address to your SyncML server. There are some incidences where on some models the line will break up into two or more. Common ways for addresses to appear are: http://www.syncserver.net/sync http://www.syncserver.net:8080/sync http://24.123.345.345:8080/sync http://sync.goosync.com http://www.mobical.net/sync/server
Username Password	Most if not all servers will have at least one level of security, if you have a username and password for SyncML security enter them here.
Folders	Folder names are specified by your SyncML service provider. In order for SyncJe for iPhone to properly sync with these folders, please ensure that all folder names and conventions are followed.

5 Synchronize using SyncJe for iPhone

The first time you synchronize a slow sync is performed. Slow sync sends all data on your device to the server. After the initial sync all modifications made on your device are recorded and transferred to the server in the next sync session. Only data changed on the client or the server will be synced.

A) Start Synchronization

1. On your iPhone browse and select the Nexthaus SyncJe  icon on your home screen.
2. Press the "Sync" button.

Sync times may vary due to the following:

- Internet connection speed
- Amount of data being transferred and time elapsed during transfer.
- OS version of your iPhone

6 The Settings Screen

A) License Name and Key

If you decide to buy the client after the trial period has expired you will get a license name and license key, which will unlock the software.

B) Server URL

This is where you enter the address to your SyncML server. On some models the line will break up into two or more, this is normal. Some common ways for addresses to appear are:

`http://www.syncserver.net/sync`
`http://www.syncserver.net:8080/sync`
<http://24.123.345.345:8080/sync>

C) User Name and Password

Most if not all servers will have at least one level of security, if you have a user name and password for SyncML security enter them here.

D) Auto Sync

If you activate this feature, syncing will occur in the background on the time interval you have selected. You can, for example, have the client automatically sync every 3 hours.

Since the sync runs as a background task, there is no visual confirmation during sync.

7 Uninstall SyncJe for iPhone

All data related to SyncJe for iPhone will be deleted including Settings and License information.

Delete SyncJe from your iPhone

1. Go to your application loader.
2. Select Uninstall
3. Select Nexthaus SyncJe for iPhone and confirm the uninstall.

SyncJe will be permanently removed from your iPhone.
